

# Beetaway®

A selective herbicide for the control of broad-leaved weeds in fodder, sugar and red beets

**Active Ingredient:** 160g/litre phenmedipham + 160g/litre desmedipham

**Chemical Group:** GROUP 5 HERBICIDE

**Formulation:** Emulsifiable concentrate (EC)

**Pack Size:** 10L

- ✓ Provides reliable broadleaf weed control with a wide application window.
- ✓ A contact herbicide which only acts via the foliage of emerged weeds and therefore does not depend on soil type or moisture.
- ✓ Good crop safety.
- ✓ Good tankmix flexibility with other beet herbicides.

## About Beetaway®

Beetaway® is a selective beet herbicide which controls a wide range of seedling broadleaved weeds in fodder, sugar and red beets. Beetaway® has no soil residual activity and has a high level of crop safety.

**General Information:** Beetaway® herbicide acts through the foliage of seedling broadleaved weeds to give selective weed control in fodder, sugar and red beet crops. This product should be used strictly in accordance with label recommendations.

**Susceptible Weeds Include:** Seedling stages of chickweed, fathen, fumitory, groundsel, redroot, shepherd's purse, spurrey, nettle and twin cress.

Black nightshade, cornbind and willow weed are controlled only if treated up to the four true leaf stage.

**RESISTANT WEEDS WARNING:** Beetaway® contains the **GROUP 5 HERBICIDES**, phenmedipham and desmedipham, and continuous use of herbicides in this group may lead to a build-up of weeds resistant to it. To prevent or delay resistance, alternate with a herbicide from another group if possible and adhere to label instructions. For more information, go to: <http://resistance.nzpps.org/>

**Resistant Weeds Include:** Grass weeds, mature annual broadleaf weeds, perennial broadleaf weeds and wireweed.

**Directions for Use:** Beetaway® does not require the addition of surfactants. Ensure spray equipment is thoroughly cleaned before use. Do not apply in more than 300 litres of water per hectare.

**Mixing:** Partly fill the spray tank and add the required amount of Beetaway® herbicide with agitation system operating. Add the remaining water and any mixing partners. Maintain agitation until spraying is complete. Do not allow spray mixture to stand overnight. Flush equipment with clean water after use. Beetaway® herbicide may be broadcast or band treated. For band treatment ensure that the use rate per sprayed area is consistent with label recommendations.

**Recommendations for Use:**

CROP	TIMING	RATE	REMARKS
<b>Red beet</b>	After the crop has 2 true leaves fully developed.		Damage may occur especially on Red beet if treated prior to 2 true leaf stage.
	Weeds up to 4 true leaf.	3 litres/ha in 200 litres of water.	Best results are obtained when weeds are treated at the youngest possible stage.
	Weeds from 4-6 true leaves and hard to kill weeds up to 4 true leaves.	4.5 litres/ha in 200 litres of water.	
<b>Fodder beet, Sugar beet</b>	Apply after the crop has 2 true leaves fully developed.	1.5 litres/ha in 200-300 litres of water.	Best results are obtained by applying Beetaway following a pre-emergence application of Ethosin 500SC. Make the first application of Beetaway in mixture with Ethosin 500SC at 2 litres/ha when weeds are from cotyledon to 2 true leaf stage and a second application 10-14 days later.
<b>NOTE: DO NOT MIX BEETAWAY WITH ANY FOLIAR NUTRIENTS OR SURFACTANTS.</b>			

**IT IS AN OFFENCE FOR USERS OF THIS PRODUCT TO CAUSE RESIDUES EXCEEDING THE RELEVANT MRL IN THE FOOD NOTICE: MAXIMUM RESIDUE LEVELS FOR AGRICULTURAL COMPOUNDS.**

**Withholding Period:** Fodder beet, Sugar beet – 56 days. Do not graze stock on treated areas for 56 days after spraying.

**Additional Information:** Do not apply if air temperature is likely to rise above 29°C, and avoid treatment if rain is likely before spray has dried on the foliage. Herbicide activity will be slowed down in cool weather.
